

## THE BEST CHOICE FOR CALIFORNIA EDUCATORS

**Scholastic Reading Inventory™ (SRI)** was developed to track students' growth in reading comprehension over time and to report their achievement on the Lexile Framework® for Reading. SRI helps educators understand early in the school year the level of growth each student needs to meet year-end goals.

Recently, the California Department of Education in conjunction with MetaMetrics, Inc., the developers of the Lexile Framework, aligned the **California Standards Test (CST)** to the Lexile Framework. Educators using SRI have tools to forecast end-of-year outcomes on this high stakes test. Understanding the relationship between the two scales can help schools maintain or improve achievement.

Now, California educators have tools to determine which students are on track for achievement and which students require intervention to meet California's state learning standards.

By assessing students three to five times a year with SRI, educators will have actionable data to direct individual student goals, to forecast outcomes on the CST, and to know the intensity of intervention needed to show growth.

Used in tens of thousands of classrooms, SRI has benefited educators as a tool to screen students on a universal scale, to benchmark student progress toward expected grade-level outcomes, and to assist in intervention decisions.
